Mira Feldmann — Curriculum Vitae

Synthetic test profile for the CONDYN end-to-end test. Not a real person.

Profile

Data and machine learning engineer with seven years of experience in streaming data platforms, MLOps and applied large language model systems in the energy sector. Focus on Python, Apache Kafka, Apache Flink, Kubernetes and retrieval-augmented generation.

Experience

Senior Data Engineer, Stromnetz Nord Analytics GmbH, Bremen — 2021 to 2026

- Built real-time stream processing pipelines with Apache Kafka and Apache Flink that ingest 40,000 smart meter readings per second.
- Introduced Avro schemas with a schema registry and managed backward-compatible schema evolution across 25 topics.
- Implemented data quality checks with Great Expectations and reduced faulty billing records by 60%.
- Set up MLflow for experiment tracking and a model registry with lineage for 12 forecasting models.
- Ran ML pipelines on Kubernetes with Argo Workflows and provisioned the infrastructure with Terraform.
- Built model monitoring dashboards that detect drift in load forecasts and trigger retraining.

Machine Learning Engineer, Wattwerk AI GmbH, Hamburg — 2019 to 2021

- Developed time series forecasting models for grid load in Python with PyTorch and LightGBM.
- Built a retrieval-augmented generation assistant over 8,000 technical maintenance documents with an LLM, vector search and structured JSON output; reduced hallucinated answers through citation checks.
- Fine-tuned a small language model with LoRA for classifying maintenance tickets.
- Modelled asset relationships as a knowledge graph in Neo4j and implemented entity resolution for duplicate equipment records.

Education

M.Sc. Data Science, Universität Hamburg, 2019. Thesis: probabilistic load forecasting.

Skills

Python, SQL, Apache Kafka, Apache Flink, Avro, Great Expectations, MLflow, Argo Workflows, Kubernetes, Terraform, Docker, PyTorch, LightGBM, Neo4j, LangChain, vector databases.

Languages

German (native), English (C1).

Certifications

Certified Kubernetes Application Developer (CKAD), 2022.
